GENERAL INFORMATIONS

We print on various types of textiles with a thermo press procedure. Your designs are printed on special foil or cut out of foil and then are brought on to the material with heat and preassure.

There are several methods of textile printing to chose from depending on the specifics of your design. multicolored pictures are done with transfer or laser print foil. for text or logos we use flex foil.

DURATION

Regularly the productions takes about 12 - 24 hours. For large orders we arrange individual terms. Laser Print Foil with contour cutting take at least 48 hours. For an extra fee of 5.00 € we also offer an express service.

TEXTILES

Only textiles that are heat-resistant can be used for printing. That excludes silk, elastane, animal wool and leather. We do not take responsibility for any external meterials brought to us. The print will be done at your own risk.

OUR STOCK

We have black and white t-shirts in different sizes, as well as bags, caps and prons in various colors.

PRICES

INFORMATIONE EXAMPLES DRICES

FLEX FOIL

For this printing methode the contours of your design are cut out of a monocolored foil and pressed on the textile with heat.

DESIGNS

Flex foil is used for prints with one or two colors and clear edges – logos and lettering for example. Photographs and gradients can not be printed with this methode.

PRINT FILES

Only vector files in **EPS** or **PDF** format can be used for flex foil printing.

LAUNDRY

The prints can be wasched at 40 - 60 °C.

COLOURS

Flex foil is available in many different colours and in matt or shiny. Here are some of the colours to choose from:

TRANSFER FOIL

Printing with transfer foil is easy and budget-friendly. However the results of this printing methode are not meant to last forever. The upside of transfer foil is its thinness wich provides a plesant wearing comfort.

Because of it's transparency transfer foil is suited best for printing on white fabric. However using it to print on coloured fabric also has it's charm. The colours of the print will mix with the colours of the fabric (shown in the right example above).

DESIGNS

All possible variations of designs can be printed with this methode – pictures with pixles as well as multicolored and gradients.

PRINT FILES

you can bring us files in **JPEG**, **TIFF** or **PDF** format. For this methode even analog templates are possible.

LAUNDRY

Use the hand or wool washing program for your prints to ensure they stay unscathed. If you use a programm for coloureds don't use more than 30 °C.

LASER PRINT FOIL

This methode is used for prints on coloured and dark fabrics. It is not transparent so it will create a white background around your design (shown in the left example above). This background can be erased with a contour cutting (shown in the right example).

DESIGNS

All possible variations of designs can be printed with this methode – pictures with pixles as well as multicolored and gradients.

PRINT FILES

you can bring us files in **JPEG**, **TIFF** or **PDF** format. For this methode even analog templates are possible.

CONTOUR CUTTING

For orders of three or more prints we offer a contour cutting for your design. If you give us a vector file (in AI, CDR, EPS or PDF format) we can cut our your design either borderless or with a 5 mm margin around it.

LAUNDRY

Prints cant be washed with 40 °C.
